

Before

After

Blower driven low pressure dirt and dust removal using static elimination technology.

The Adamark Brand Air Knife Cleaning Systems offer an engineered solution to clean unwanted material from finished products or production process. Adamark Systems are blower driven; no compressed air is used. Adamark Systems provide superior cleaning results at a fraction of the cost of typical compressed air driven products.

The Adamark brand uses compact, quiet, and economical high speed centrifugal, or regenerative blowers to create velocity equal to that of compressed air.

Typical applications:

- Conveyor cleaning
- Frost removal
- Belt cleaning
- Dust removal
- Static removal
- Product cleaning
- Film or webb cleaning
- Extruded products cleaning

Industrial process applications:

- Product cleaning prior to labelling or coding
- Product cleaning prior to painting or coating
- Finished product dust or lint removal
- Packaging line cleaning and static control
- Package cleaning prior to bag sealing

Before

After

Statically charged powder removal using blower driven low pressure air knives and static elimination technology.

Adamark Systems incorporate the Haug brand of static elimination products into all engineered applications in which static charges on the product or package reduce the quality and increase production time and costs.

Static in some cases can cause a health and/or safety risk. The Adamark Cleaning System provides cost effective complete systems to remove static allowing for improved production, quality and safety.

Many companies supply the parts to be installed. Adamark provides the complete solution. There are complete conveyor systems with turn key operation or engineered systems designed to bolt onto existing process or conveyors.

The dust or product removed can be collected in the unique Adamark closed loop blow-off suction system. When the dirt load in a shift requires high capacity collection the system incorporates separate bag type evacuation systems with drum collection.

Improves product quality, production efficiency, eliminates compressed air usage and cost, improves safety.

Everything is custom. All things are possible.

Adamark offers a complete line of airknife product drying systems to dry and prepare products prior to labelling, coding, and packaging. The Adamark Brand Airknife Drying System cleans and dries conveyors to reduce cleaning and sanitation times.
